

FEATURES

- for light material high-dump clearance and reach applications
- oversize for high-capacity applications
- OEM pin-on or coupler equipped
- grapple kit available for extra high capacity in light material applications
- standard with bolt-on edges and auxiliary heel plates
- ideal for charging grinders, high side-board trucks, mixing trucks and other high-dump clearance applications
- extra valving is required for operation

RyLind High-Dump Roll-out Buckets can increase dump clearance heights and reach by 40" or more. A 2.5 yard loader with a high-capacity 5 yard bucket can have a 15' dump clearance and extended reach. The vertical rear mounted twin cylinder design greatly reduces the tunnels in the bottom of the bucket. This also reduces load on the cylinders and keeps them out of the dirt and debris.
