

FEATURES

- Open Sides for Carrying Long Material
- Smaller Debris Collects in Bucket
- Center Brace for Strength
- Independently Operated Grapples
- Hardened Pins & Bushings at Hinge Points
- Third Function Valve Required for Operation

Rylind Scrap Material Grapple Buckets are designed with open sides to handle different lengths of scrap materials such as lumber, brush, landscape trash, and recycled aluminum. The grapple bucket will also scoop and collect smaller debris for faster site cleanup. The grapples open wide enough to scoop materials close to a retaining wall and are mounted with easily replaceable hardened pins and bushings. Various types of mounting systems are available including Rylind Wedge-loc coupler systems, Pin-loc coupler systems and pin-on dedicated mountings.
